Foreign exchange and interest rate related contracts are subject to market risk and credit risk.

## Market risk

Market risk is the potential change in value caused by movement in market rates or prices. The contractual amounts stated above provide only a measure of involvement in these types of transactions and do not represent the amounts subject to market risk. Exposure to market risk may be reduced through offsetting on and off-balance sheet positions. As at end of the financial half-year, the amount of contracts which were not hedged and hence, exposed to market risk was RM22.1 million (31 December 2002: RM2.9 million).

## Credit risk

Credit risk arises from the possibility that a counter-party may be unable to meet the terms of a contract in which the Bank has a gain position. As at end of the financial half-year, the amounts of credit risk, measured in term of the cost to replace the profitable contracts was RM8.4 million (31 December 2002: RM6.1 million). This amount will increase or decrease over the life of the contracts, mainly as a function of maturity dates and market rates or prices.

## Related accounting policies

Premium or discount on all foreign exchange forward contracts that qualify as hedges are amortised to income statement on a straight line basis over the period of the contract.

Outstanding forward contracts that do not qualify as hedges are revalued using the net present value method, and the resulting gain or losses computed based on future cash flows discounted using the applicable interest rates for the cash flows, is taken to the income statement.

Interest income or interest expense associated with interest rate swaps that qualify as hedges is recognized over the life of the swaps agreement as a component of interest income or interest expense. Gains and losses on interest rate swaps and futures contracts that qualify as hedges are generally deferred over the life of the underlying assets or liabilities.

Gains and losses on interest rate swaps and futures contracts that do not qualify as hedges are recognised in the current period using the mark-to-market method.
